

Class 16

How much? How many?

Julian: Pastry Palace, this is Julian speaking. How can I help you?

Gina: Hello, Julian! I'm planning a brunch and would like to order some of your cupcakes.

Julian: Of course! **How many** would you like to order?

Gina: It depends on the price. **How much** do they cost?

Julian: Well, our cheapest box comes with a dozen cupcakes and it costs \$40 dollars. We also have a box with two dozen, which costs \$50 dollars. If you buy 3 dozen cupcakes, the price is \$60 dollars.

Gina: I see. Please, remind me, **how many** cupcakes would 3 dozen be?

Julian: It would be 36 cupcakes.

Gina: Hmmm, I think that's too many cupcakes. But 2 dozen are 24 cupcakes, is that right?

Julian: That's right! 24 cupcakes for \$50 dollars.

Gina: Great! 24 should be enough. Mmm... **How much** sugar do they have?

Julian: Not that much. They are healthy.

Gina: Alright, I'll take them!

Julian: Would you like something to drink? We have coffee and tea.

Gina: What types of coffee do you have?

Julian: We have latte and cappuccino.

Gina: And **how much** milk do they have?

Julian: The latte has two cups of milk and the cappuccino one.

Gina: I'll take 10 lattes and 12 cappuccinos.

Julian: Fantastic! That will be \$50 dollars for the cupcakes and 40 dollars for the coffee, plus the delivery.

Gina: **How much** does the delivery cost?

Julian: \$3 dollars. So it's \$50 dollars for the cupcakes, plus \$40 dollars for the coffee and \$3 dollars for the delivery, for a total of \$93 dollars.

Gina: Okay! Sounds good.

Julian: Please give me your address to schedule the delivery.

Gina: Sure! It's 80th street with Green Avenue...
